

# Shenzhen Zhongjian Nanfang Testing Co., Ltd.

Report No: CCISE190304503

# FCC REPORT (BLE)

Applicant: ShenZhen Aratek Biometrics Technology Co., Ltd.

Address of Applicant: 2F, T2-A Building, ShenZhen Software Park, South Area, Hi-

Tech Park, Shenzhen, Guangdong, China

**Equipment Under Test (EUT)** 

Product Name: Mobile ID Terminal

Model No.: Marshall, Marshall L, Marshall U, Marshall M, Marshall C,

Marshall S, Marshall 8, BM5510, BM5520

FCC ID: 2AGUJMARSHALL

Applicable standards: FCC CFR Title 47 Part 15 Subpart C Section 15.247

Date of sample receipt: 14 Mar., 2019

**Date of Test:** 14 Mar., to 16 May, 2019

Date of report issued: 16 May, 2019

Test Result: PASS \*

#### Authorized Signature:

Bruce Zhang Laboratory Manager

This report details the results of the testing carried out on one sample. The results contained in this test report do not relate to other samples of the same product and does not permit the use of the CCIS product certification mark. The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report.

This report may only be reproduced and distributed in full. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards.

This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 90 days only.

<sup>\*</sup> In the configuration tested, the EUT complied with the standards specified above.

| Address:      | 2F, T2-A Building, ShenZhen Software Park, South Area, Hi-Tech Park, Shenzhen, Guangdong, China |
| Manufacturer: | ShenZhen Aratek Biometrics Technology Co., Ltd.   |
| Address:      | 2F,T2-A Building, ShenZhen Software Park, South Area, Hi-Tech Park, Shenzhen, Guangdong, China  |

# 5.2 General Description of E.U.T.

| •                      |   |
|------------------------|---|
| Product Name:          | Mobile ID Terminal  |
| Model No.:             | Marshall, Marshall L, Marshall U, Marshall M, Marshall C, Marshall S, Marshall 8, BM5510, BM5520  |
| Operation Frequency:   | 2402-2480 MHz   |
| Channel numbers:       | 40  |
| Channel separation:    | 2 MHz   |
| Modulation technology: | GFSK  |
| Data speed :           | 1Mbps   |
| Antenna Type:          | Internal Antenna  |
| Antenna gain:          | 2.4 dBi   |
| Power supply:          | Rechargeable Li-ion Battery DC3.8V-10000mAh   |
| AC adapter:            | Model: RH-050250US<br>Input: AC100-240V, 50/60Hz, 0.6A<br>Output: DC 5.0V, 2500mA   |
| Test Sample Condition: | The test samples were provided in good working order with no visible defects.   |
| Remark:                | Item No.: Marshall, Marshall L, Marshall U, Marshall M, Marshall C, Marshall S, Marshall 8, BM5510, BM5520 were identical inside, the electrical circuit design, layout, components used and internal wiring, with difference being model name and shell color. |

| 8                                   | 2418MHz   | 18      | 2438MHz   | 28      | 2458MHz   | 38      | 2478MHz   |
| 9                                   | 2420MHz   | 19      | 2440MHz   | 29      | 2460MHz   | 39      | 2480MHz   |
| N                                   |           |         |           |         |           |         |           |

Note:

In section 15.31(m), regards to the operating frequency range over 10 MHz, the Lowest frequency, the middle frequency, and the highest frequency of channel were selected to perform the test. Channel No. 0, 20 & 39 were selected as Lowest, Middle and Highest channel.

Shenzhen Zhongjian Nanfang Testing Co., Ltd. No. B-C, 1/F., Building 2, Laodong No.2 Industrial Park, Xixiang Road, Bao'an District, Shenzhen, Guangdong, China

#### 5.3 Test environment and test mode

| Operating Environment: |   |
|------------------------|---|
| Temperature:           | 24.0 °C   |
| Humidity:              | 54 % RH   |
| Atmospheric Pressure:  | 1010 mbar   |
| Test mode:             |   |
| Transmitting mode      | Keep the EUT in continuous transmitting with modulation |

Report No: CCISE190304503

The sample was placed 0.8m (below 1GHz)/1.5m (above 1GHz) above the ground plane of 3m chamber. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, rotating the turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. The emissions worst-case are shown in Test Results of the following pages. Duty cycle setting during the transmission is 100% with maximum power setting for all modulations.

# 5.4 Description of Support Units

The EUT has been tested as an independent unit.

## 5.5 Measurement Uncertainty

| Parameters                          | Expanded Uncertainty |
|-------------------------------------|----------------------|
| Conducted Emission (9kHz ~ 30MHz)   | ±1.60 dB (k=2)       |
| Radiated Emission (9kHz ~ 30MHz)    | ±3.12 dB (k=2)       |
| Radiated Emission (30MHz ~ 1000MHz) | ±4.54 dB (k=2)       |
| Radiated Emission (1GHz ~ 18GHz)    | ±5.84 dB (k=2)       |
| Radiated Emission (18GHz ~ 40GHz)   | ±3.36 dB (k=2)       |

## 5.6 Laboratory Facility

The test facility is recognized, certified, or accredited by the following organizations:

#### FCC - Registration No.: 727551

Shenzhen Zhongjian Nanfang Testing Co., Ltd. has been accredited as a testing laboratory by FCC (Federal Communications Commission). The Registration No. is 727551.

#### IC - Registration No.: 10106A-1

The 3m Semi-anechoic chamber of Shenzhen Zhongjian Nanfang Testing Co., Ltd. has been Registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 10106A-1.

#### CNAS - Registration No.: CNAS L6048

Shenzhen Zhongjian Nanfang Testing Co., Ltd. is accredited to ISO/IEC 17025:2005 General Requirements for the Competence of Testing and Calibration laboratories for the competence of testing. The Registration No. is CNAS L6048.

#### A2LA - Registration No.: 4346.01

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2005 General requirements for the competence of testing and calibration laboratories. The test scope can be found as below link: https://portal.a2la.org/scopepdf/4346-01.pdf

## 6 Test results and Measurement Data

## 6.1 Antenna requirement:

#### **Standard requirement:** FCC Part 15 C Section 15.203 /247(b)

15.203 requirement:

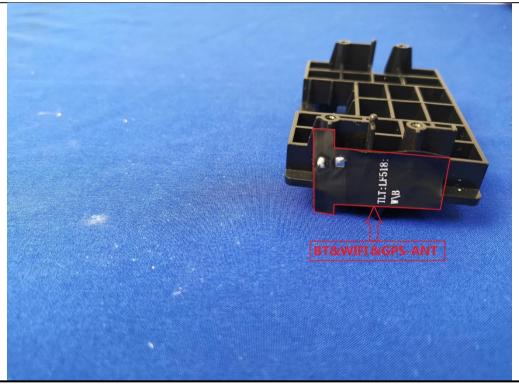

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

15.247(b) (4) requirement:

(4) The conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi. Except as shown in paragraph (c) of this section, if transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power from the intentional radiator shall be reduced below the stated values in paragraphs (b)(1), (b)(2), and (b)(3) of this section, as appropriate, by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

#### **E.U.T Antenna:**

The BLE antenna is an Internal antenna which cannot replace by end-user, the best-case gain of the antenna is 2.4 dBi.

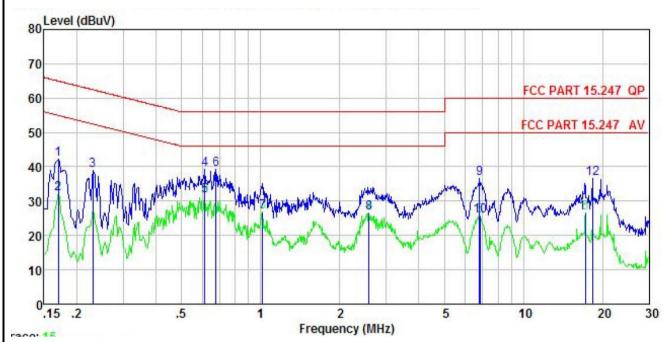

# 6.2 Conducted Emission

| Test Requirement:     | FCC Part 15 C Section 15.207   |  |           |  |  |
|-----------------------|--|--|-----------|--|--|
| Test Method:          | ANSI C63.10: 2013  |  |           |  |  |
| Test Frequency Range: | 150 kHz to 30 MHz  | 150 kHz to 30 MHz  |           |  |  |
| Class / Severity:     | Class B  |  |           |  |  |
| Receiver setup:       | RBW=9kHz, VBW=30kHz  |  |           |  |  |
| Limit:                | Francisco (MIII-)  | Limit (  | (dBuV)    |  |  |
|                       | Frequency range (MHz)  | Quasi-peak   | Average   |  |  |
|                       | 0.15-0.5   | 66 to 56*  | 56 to 46* |  |  |
|                       | 0.5-5  | 56   | 46        |  |  |
|                       | 5-30   | 60   | 50        |  |  |
| Test procedure        | <ol> <li>The E.U.T and simulatine impedance stability 50ohm/50uH coupling</li> <li>The peripheral devices a LISN that provides a termination. (Please rephotographs).</li> <li>Both sides of A.C. line interference. In order positions of equipmer</li> </ol> | <ol> <li>line impedance stabilization network (L.I.S.N.), which provides a 50ohm/50uH coupling impedance for the measuring equipment.</li> <li>The peripheral devices are also connected to the main power through a LISN that provides a 50ohm/50uH coupling impedance with 50ohm termination. (Please refer to the block diagram of the test setup and photographs).</li> <li>Both sides of A.C. line are checked for maximum conducted interference. In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.4: 2014 on conducted</li> </ol> |           |  |  |

#### Notes

- 1. An initial pre-scan was performed on the line and neutral lines with peak detector.
- 2. Quasi-Peak and Average measurement were performed at the frequencies with maximized peak emission.
- 3. Final Level =Receiver Read level + LISN Factor + Cable Loss.

# 6.7 Spurious Emission

## 6.7.1 Conducted Emission Method

| Test Requirement: | FCC Part 15 C Section 15.247 (d)  |  |  |  |  |  |  |
|-------------------|---|--|--|--|--|--|--|
| Test Method:      | ANSI C63.10:2013 and KDB 558074   |  |  |  |  |  |  |
| Limit:            | In any 100 kHz bandwidth outside the frequency band in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. |  |  |  |  |  |  |
| Test setup:       | Spectrum Analyzer  E.U.T  Non-Conducted Table  Ground Reference Plane   |  |  |  |  |  |  |
| Test Instruments: | Refer to section 5.8 for details  |  |  |  |  |  |  |
| Test mode:        | Refer to section 5.3 for details  |  |  |  |  |  |  |
| Test results:     | Passed  |  |  |  |  |  |  |

#### Test plot as follows:

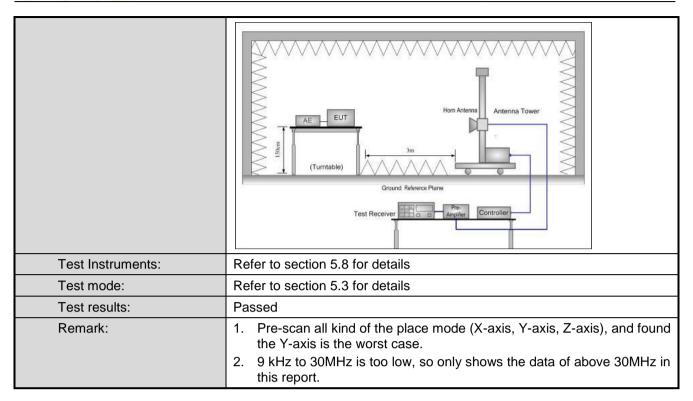

#### 6.7.2 Radiated Emission Method

#### Remark:

- 1. Final Level = Receiver Read level + Antenna Factor + Cable Loss Preamplifier Factor.
- 2. The emission levels of other frequencies are very lower than the limit and not show in test report.

#### Remark.

<sup>1.</sup> Final Level = Receiver Read level + Antenna Factor + Cable Loss - Preamplifier Factor.

<sup>2.</sup> The emission levels of other frequencies are very lower than the limit and not show in test report.
